Re: New Install of Water Bug System at the Flamenco Towers Condominium

To Whom It May Concern,

A new water sensor system has been installed inside each unit of the Flamenco Towers. This installation was done by Premier Alarms.

The system consists of two separate water sensors; one installed by the refrigerator, and the other inside the HVAC closet, and an individual annunciator panel, located by our 24-hr security desk.

Feel free to contact the office should you have any questions.

For the Flanco Condominium Association, Inc.,

Nikki James, LCAM
